Mathematical Logic and Graph Theory 2022 Homework 3 Answers

By Jingyi Chen with C and Songxiao Guo with G after each question number.

1.8.5 C

Prove that if x and y are real numbers, then $\max(x, y) + \min(x, y) = x + y$.

假设 $x \geq y$，则 $\max(x, y) = x, \min(x, y) = y$；假设 $x \leq y$，则 $\max(x, y) = y, \min(x, y) = x$，
$\therefore x + y = \max(x, y) + \min(x, y)$。

1.8.13 C

Prove that there exists a pair of consecutive integers such that one of these integers is a perfect square and the other is a perfect cube.

8和9。

1.8.27 G

Write the numbers $1, 2, \cdots, 2n$ on a blackboard, where n is an odd integer. Pick any two of the numbers, j and k, write $|j - k|$ on the board and erase j and k. Continue this process until only one integer is written on the board. Prove that this integer must be odd.
数字和的奇偶性不变。最初情况为 $1 + 2 + \cdots + 2n = n(2n + 1) \equiv n \equiv 1(\mod 2)$。每次减少一个数，最后达到只剩一个数的情况，此时该数为奇数。

1.8.51 G

- a) Draw each of the five different tetrominoes, where a tetromino is a polyomino consisting of four squares.
- b) For each of the five different tetrominoes, prove or disprove that you can tile a standard checkerboard using these tetrominoes.

a) （1） （2） （3） （4） （5）
b)下图展示了用前四种四联骨牌的拼接。

假设第(5)种可以覆盖，则左上角必定有一块。根据其形状，则第一行或第一列的每个位置都有唯一的放置方式，将导致第一行或第一列最后一个格子无法被覆盖。

2.1.11 G

Determine whether each of these statements is true or false.

- a) $0 \in \emptyset$
- b) $\emptyset \in \{0\}$
- c) $\{0\} \subset \emptyset$
- d) $\emptyset \subset \{0\}$
- e) $\{0\} \in \{0\}$
- f) $\{0\} \subset \{0\}$
- g) $\{\emptyset\} \subseteq \{\emptyset\}$

- a) F
- b) F
- c) F
- d) T
- e) F
- f) F
- g) T

2.1.27 G

Prove that $\mathcal{P}(A) \subseteq \mathcal{P}(B)$ if and only if $A \subseteq B$.

- 充分性：已知 $A \subseteq B$，对 $\forall x \in \mathcal{P}(A)$，有 $x \subseteq A \subseteq B$，故有 $x \in \mathcal{P}(B)$。由 x 的任意性得 $\mathcal{P}(A) \subseteq \mathcal{P}(B)$.
- 必要性：已知 $\mathcal{P}(A) \subseteq \mathcal{P}(B)$，对 $\forall x \in A$，有 $\{x\} \in \mathcal{P}(A) \subseteq \mathcal{P}(B)$，故有 $x \in B$。由 x 的任意性得 $A \subseteq B$.

2.1.41 G

Explain why $A \times B \times C$ and $(A \times B) \times C$ are not the same.

$$A \times B \times C = \{(a,b,c)|a \in A, b \in B, c \in C\},$$
$$(A \times B) \times C = \{((a,b),c)|a \in A, b \in B, c \in C\}.$$

2.1.43 G

Prove or disprove that if A and B are sets, then $\mathcal{P}(A \times B) = \mathcal{P}(A) \times \mathcal{P}(B)$.

结论错误。设 $A = B = \emptyset$，则 $\mathcal{P}(A \times B) = \{\emptyset\}$，$\mathcal{P}(A) \times \mathcal{P}(B) = \{(\emptyset, \emptyset)\}$，二者明显不相等。

2.1.49 G

> The defining property of an ordered pair is that two ordered pairs are equal if and only if their first elements are
> equal and their second elements are equal. Surprisingly, instead of taking the ordered pair as a primitive concept, we can construct ordered pairs using basic notions from set theory. Show that if we define the ordered pair (a, b) to be $\{\{a\}, \{a, b\}\}$, then $(a, b) = (c, d)$ if and only if $a = c$ and $b = d$.

- 充分性：已知 $a = c, b = d$ 时，$\{\{a\}, \{a, b\}\} = \{\{c\}, \{c, d\}\}$ 显然成立。
- 必要性：已知 $\{\{a\}, \{a, b\}\} = \{\{c\}, \{c, d\}\}$ 时，
    - $a = b$，则 $\{\{a\}, \{a, b\}\} = \{a\}$，$\{\{c\}, \{c, d\}\} = \{c\}$，即已知 $\{a\} = \{c\}$，便有 $a = c$，推知 $b = d$。
        - $a \neq b$，则 $\{\{a\}, \{a, b\}\}$ 是二元集，含有一个一元集和一个二元集。两集合相等，故 $\{\{c\}, \{c, d\}\}$ 也含有一个一元集和一个二元集。这样便有 $c \neq d$。故 $\{a\} = \{c\} \Rightarrow a = c$。又 $\{a, b\} = \{c, d\}$，易得 $b = d$。

2.2.19 G

> Show that if A, B, and C are sets, then $\overline{A \cap B \cap C} = \overline{A} \cup \overline{B} \cup \overline{C}$

- a) by showing each side is a subset of the other side.
- b) using a membership table.

- a)

$$x \in \overline{A \cap B \cap C} \equiv x \in \overline{A} \cup \overline{B} \cup \overline{C}$$
$$\equiv x \notin A \vee x \notin B \vee x \notin C$$
$$\equiv x \in \overline{A} \vee x \in \overline{B} \vee x \in \overline{C}$$
$$\equiv x \in \overline{A} \cup \overline{B} \cup \overline{C}.$$

-

A	B	C	$A \cap B \cap C$	$\overline{A \cap B \cap C}$	$\overline{A}$	$\overline{B}$	$\overline{C}$	$\overline{A} \cup \overline{B} \cup \overline{C}$
1	1	1	1	0	0	0	0	0
1	1	0	0	1	0	0	1	1
1	0	1	0	1	0	1	0	1
1	0	0	0	1	0	1	1	1
0	1	1	0	1	1	0	0	1
0	1	0	0	1	1	0	1	1
0	0	1	0	1	1	1	0	1
0	0	0	0	1	1	1	1	1

2.2.35 G

> Let A, B, and C be sets. Use the identities in Table 1 to show that
> $\overline{(A \cup B)} \cap \overline{(B \cup C)} \cap \overline{(A \cup C)} = \overline{A} \cap \overline{B} \cap \overline{C}.$

$$\overline{(A \cup B)} \cap \overline{(B \cup C)} \cap \overline{(A \cup C)} = \overline{A} \cap \overline{B} \cap \overline{B} \cap \overline{C} \cap \overline{A} \cap \overline{C} \qquad \text{德·摩根律}$$
$$= \overline{A} \cap (\overline{B} \cap \overline{B}) \cap \overline{C} \cap \overline{A} \cap \overline{C} \qquad \text{结合律}$$
$$= \overline{A} \cap \overline{B} \cap \overline{C} \cap \overline{A} \cap \overline{C} \qquad \text{幂等律}$$
$$= \overline{A} \cap \overline{B} \cap (\overline{C} \cap \overline{A}) \cap \overline{C} \qquad \text{结合律}$$
$$= \overline{A} \cap \overline{B} \cap (\overline{A} \cap \overline{C}) \cap \overline{C} \qquad \text{交换律}$$
$$= \overline{A} \cap \overline{B} \cap \overline{A} \cap (\overline{C} \cap \overline{C}) \qquad \text{结合律}$$
$$= \overline{A} \cap \overline{B} \cap \overline{A} \cap \overline{C} \qquad \text{幂等律}$$
$$= \overline{B} \cap \overline{A} \cap \overline{A} \cap \overline{C} \qquad \text{交换律}$$
$$= \overline{B} \cap (\overline{A} \cap \overline{A}) \cap \overline{C} \qquad \text{结合律}$$
$$= \overline{B} \cap \overline{A} \cap \overline{C} \qquad \text{幂等律}$$
$$= \overline{A} \cap \overline{B} \cap \overline{C} \qquad \text{交换律.}$$

2.2.47 C

Suppose that A, B, and C are sets such that $A \oplus C = B \oplus C$. Must it be the case that $A = B$?

是的。

对$\forall x \in A$，如果$x \in C$则有$x \notin A \oplus C$，因此$x \notin B \oplus C$，从而$x \in B$;

如果$x \notin C$则有$x \in A \oplus C$，因此$x \in B \oplus C$，从而$x \in B$;

对$\forall x \in B$，同理有$x \in A$，所以$A = B$。

2.3.3 C

Determine whether f is a function from the set of all bit strings to the set of integers if

- a) $f(S)$ is the position of a 0 bit in S.
- b) $f(S)$ is the number of 1 bits in S.
- c) $f(S)$ is the smallest integer i such that the ith bit of S is 1 and $f(S) = 0$ when S is the empty string, the string with no bits.

a) 不是，因为"某个0"的位置是不确定的。

b)是的，1的个数由S确定。

c)不是，例如S是000。

2.3.21 C

Give an explicit formula for a function from the set of integers to the set of positive integers that is

- a) one-to-one, but not onto.
- b) onto, but not one-to-one.
- c) one-to-one and onto.
- d) neither one-to-one nor onto.

- a)例如$f(x) = 3x + 1(x \geq 0), f(x) = -3x + 2(x < 0)$。
- b)例如$f(x) = |x| + 1$。
- c)例如$f(x) = 2x + 1(x \geq 0), f(x) = -2x(x < 0)$。
- d)例如$f(x) = x^2 + 1$。

2.3.37 C

If f and $f \circ g$ are onto, does it follow that g is onto? Justify your answer.

不一定，比如$A = a, B = b, c, C = d, g(a) = b, f(b) = d, f(c) = d$。类似这样构造一个中间的较大的集合和两侧较小的集合，使得g不能映上即可。

2.4.27 C

Show that if a_n denotes the nth positive integer that is not a perfect square, then $a_n = n + \{\sqrt{n}\}$, where $\{x\}$ denotes the integer closest to the real number x.

把正整数分成两部分，一部分是完全平方数$1^2, 2^2, \ldots, k^2$，另一部分是去掉完全平方数后的序列$a_1, a_2, \ldots, a_n$，这时 $k^2 < n + k < (k+1)^2$，

即$(k - 1/2)^2 + 3/4 = k^2 - k + 1 \le n \le (k + 1/2)^2 - 1/4$，

因此$k = \{\sqrt{n}\}$，$a_n = n + \{\sqrt{n}\}$。

2.5.11 C

Give an example of two uncountable sets A and B such that $A \cap B$ is

- a) finite.
- b) countably infinite.
- c) uncountable.

- a)例如$A = [0,1], B = [2,3]$, 直接没交集。
- b)例如$A = [0,1] \cup Z, B = [2,3] \cup Z$，交集把不可数的去掉了。
- c)例如$A = B = [0,1]$，交集有一段不可数的即可。

2.5.17 C

If A is an uncountable set and B is a countable set, must $A - B$ be uncountable?

是的。如果$A - B$可数，则$(A - B) + (A \cap B) = A$可数；A不可数，所以$A - B$不可数。

2.5.31 G

Show that $Z^+ \times Z^+$ is countable by showing that the polynomial function $f : Z^+ \times Z^+ \to Z^+$ with $f(m,n) = (m + n - 2)(m + n - 1) / 2 + m$ is one-to-one and onto.

- 映上：对于任意$z = f(m,n)$，若$(x-2)(x-1)/2 < z < (x-1)x/2$，则取 $m = z - (x-2)(x-1)/2, n = x - m$。

- 一对一：先证明$m + n$固定时函数是一对一的。$f(x) = (x-2)(x-1)/2$，在$(1, \infty)$上单调递增，故为一对一的。

  假设$f(m_1, n_1) = f(m_2, n_2)$，则

$$0 = f(m_1, n_1) - f(m_2, n_2) =$$

$$m_1 - m_2 + \frac{1}{2}((m_1 + m_2)(m_1 - m_2) + (n_1 + n_2)(n_1 - n_2) + 2n_1 m_1 - 2n_2 m_2 - 3(m_1 - m_2) - 3(n_1 - n_2))$$

$$= (m_1 - m_2)(\frac{1}{2}(m_1 + m_2) + n_1 - 1) + (n_1 - n_2)(\frac{1}{2}(n_1 + n_2) + m_1 - \frac{3}{2}).$$

  若$m_1 = m_2$，则$n_1 = n_2$；否则$(n_1 - n_2) \ne 0$，等价地可推出

$$0 = (m_2 - m_1)(\frac{1}{2}(m_2 + m_1) + n_2 - 1) + (n_2 - n_1)(\frac{1}{2}(n_2 + n_1) + m_2 - \frac{3}{2}),$$

  由$(\frac{1}{2}(m_1 + m_2) + n_1 - 1) > 0$，$(\frac{1}{2}(n_1 + n_2) + m_1 - \frac{3}{2}) > 0$，无论$n_1 > n_2$还是$n_2 > n_1$，都有正数等于$0$的矛盾。故有$m_1 = m_2, n_1 = n_2$。
